Version 1.0 · August 2026 · Printable A4 edition

How to use this workbook

This booklet converts the Riv Burger website into a complete paper-based learning pathway. Work through each module in order unless your teacher directs otherwise. Keep the workbook as one record of your thinking, planning, practical evidence and reflection.

READ	Study the concise theory and purposeful visual.
CHECK	Circle answers, then use the answer key to identify what to revisit.
EXPLAIN	Use the scaffold, sentence starter and appropriate response example to write a specific response.
APPLY	Complete the project activity and connect theory to your burger design.
EVIDENCE	Keep decisions, practical observations, feedback and improvements clear enough to review later.

Safety boundary: This workbook does not authorise unsupervised or home practical work. Follow your teacher's demonstrations and current instructions for food safety, allergens, equipment, storage, cooking, cleaning and garden work.

Submission boundary: The website and this workbook support learning and evidence. Due dates, lesson timing and the formal submission method remain Teacher to confirm.

Course map

Module	Focus	Evidence
1	The challenge	3 theory sections · 12 checks · 3 written responses · 1 project activity
2	Safe food practices	3 theory sections · 12 checks · 3 written responses · 1 project activity
3	Tools and workflow	3 theory sections · 12 checks · 3 written responses · 1 project activity
4	Burger anatomy	3 theory sections · 12 checks · 3 written responses · 1 project activity
5	Ingredients and agriculture	3 theory sections · 12 checks · 3 written responses · 1 project activity
6	Develop your design	3 theory sections · 12 checks · 3 written responses · 1 project activity
7	Garden to kitchen	3 theory sections · 12 checks · 3 written responses · 1 project activity
8	Plan production	3 theory sections · 12 checks · 3 written responses · 1 project activity
9	Produce and present	3 theory sections · 12 checks · 3 written responses · 1 project activity
10	Evaluate and reflect	3 theory sections · 12 checks · 3 written responses · 1 project activity

Assessment and evidence guide

The authorised school task asks students to design and produce a signature burger using locally grown produce and home-grown herbs, then communicate and evaluate the design process.

- Develop and communicate burger design options.
- Select and justify a final design against criteria and constraints.
- Prepare the required recipe, food order and workplan.
- Produce and present the burger using safe food practices.
- Evaluate the result and reflect on practical learning.

Component	Marks in source task	Evidence
Folio	25	Research, design development, recipe, planning and evaluation.
Practical skills	60	Safe and hygienic work, preparation, equipment use, production management and cleaning.
Final design	15	Function, aesthetics, creativity, ergonomics, ethical and environmental considerations, and time management.
Total	100	Combined design, production and evaluation evidence.

Teacher to confirm: Whether the source mark allocation applies to the current class, plus current due dates, lesson timing, supplied ingredients and submission arrangements.

MODULE 01

The challenge

Understand the design situation before proposing a solution.

Visual focus for Module 1: The challenge.

YOU WILL LEARN

- 1.1 Design situation and brief
- 1.2 Users and needs
- 1.3 Criteria and constraints

EVIDENCE CHECKPOINT

- 3 theory sections
- 12 knowledge-check questions
- 3 guided written responses
- 1 project activity

Teacher to confirm: Lesson timing, practical arrangements, ingredients, equipment, dietary and allergen requirements, supervision and formal submission details.

MODULE 1 · READ

1.1 Design situation and brief

A design situation explains the need or opportunity. In this unit, a small local food business wants a burger that appeals to young people while showing that fresh, local and more sustainable choices can compete with familiar fast-food products.

The design brief turns that situation into action: develop a signature burger featuring locally grown produce and home-grown herbs. Your solution needs to be realistic for a school food-technology setting.

Course infographic: The challenge.

Stop and think: Underline two subject words in the theory. In the margin, write how each word connects to your burger project.

CHECK YOUR UNDERSTANDING

1. Which statement best defines design brief?

A a clear design task developed from a need or opportunity	B a decorative feature with no effect on the product	C a task completed only after the final practical
--	--	---

2. Which action best applies the theory?

A choose ingredients before understanding the need	B wait until evaluation before considering it	C identify the product, intended user and important qualities before developing ideas
--	---	---

3. Which risk does this section help the student recognise?

A the website changing colour	B having to explain a justified choice	C a visually appealing product may fail to answer the brief
-------------------------------	--	---

4. Which correction best addresses the misconception “a design brief is a final recipe”?

A the misconception is always correct	B evidence and criteria are unnecessary	C a brief defines the task; the recipe is developed later
---------------------------------------	---	---

Your score after checking the answer key: ____ / 4 One idea to revisit: _____

MODULE 1 · EXPLAIN

Guided response · 1.1 Design situation and brief

Your task: Rewrite the design brief in your own words. Include the product, intended user and two important qualities.

Show that you understand who the burger is for, what must be designed and what qualities matter.

1 Select the precise theory and evidence that answer the question.	2 Explain the connection using subject vocabulary and a clear because, so or therefore link.	3 Check that every part of the prompt is answered and that claims are specific.
--	--	---

Sentence starter: The task is to design a signature burger for... It needs to...

Appropriate response example: The task is to develop a practical signature burger for young customers that features verified local produce and a home-grown herb while remaining safe and realistic to make at school.

YOUR RESPONSE

Self-check: ☐ I answered every part ☐ I used subject vocabulary ☐ I linked claims with because, so or therefore ☐ I checked specificity

MODULE 1 · READ

1.2 Users and needs

A successful burger is designed for people, not only for a photograph. A young customer may value flavour, appearance, value, convenience and a size that is comfortable to hold and eat. The cook needs a clear recipe, safe method, suitable tools and enough time.

These needs can compete. Extra height may look impressive but reduce ergonomics. Many fillings may add flavour but make production slower and the burger unstable.

Stop and think: Underline two subject words in the theory. In the margin, write how each word connects to your burger project.

CHECK YOUR UNDERSTANDING

1. Which statement best defines user need?

A something the customer or producer requires from the solution	B a decorative feature with no effect on the product	C a task completed only after the final practical
---	--	---

2. Which action best applies the theory?

A design only for a dramatic photograph	B wait until evaluation before considering it	C balance flavour, appearance, value, convenience, size and production needs
---	---	--

3. Which risk does this section help the student recognise?

A the website changing colour	B having to explain a justified choice	C extra height or too many fillings can reduce stability and convenience
-------------------------------	--	--

4. Which correction best addresses the misconception “more ingredients always create a better user experience”?

A the misconception is always correct	B evidence and criteria are unnecessary	C ingredients must work together without making production or eating difficult
---------------------------------------	---	--

Your score after checking the answer key: ____ / 4 One idea to revisit: _____

MODULE 1 · EXPLAIN

Guided response · 1.2 Users and needs

Your task: Explain the needs of the intended customer and the cook. Identify one likely trade-off between those needs.

Name what each user needs, then explain where satisfying one need may make another harder to meet.

1 Select the precise theory and evidence that answer the question.	2 Explain the connection using subject vocabulary and a clear because, so or therefore link.	3 Check that every part of the prompt is answered and that claims are specific.
--	--	---

Sentence starter: The intended customer needs... The cook needs... A trade-off occurs when...

Appropriate response example: The customer needs strong flavour and a burger that is comfortable to hold, while the cook needs a simple method that fits the lesson. Adding several fillings may increase flavour but make the product slower to assemble and less stable.

YOUR RESPONSE

Self-check: ☐ I answered every part ☐ I used subject vocabulary ☐ I linked claims with because, so or therefore ☐ I checked specificity

MODULE 1 · READ

1.3 Criteria and constraints

Criteria are the qualities used to judge success: function, appearance, creativity, ergonomics, ethical choices, environmental impact and time management. Constraints are real limits such as lesson time, available equipment, ingredient access, budget, skills, safety and dietary needs. Design habit: write criteria so they can be tested. “Easy to hold without fillings falling out” is more useful than “good”.

Stop and think: Underline two subject words in the theory. In the margin, write how each word connects to your burger project.

CHECK YOUR UNDERSTANDING

1. Which statement best defines testable criterion?

A a specific quality that can be checked to judge design success	B a decorative feature with no effect on the product	C a task completed only after the final practical
--	--	---

2. Which action best applies the theory?

A use “good” as the only success measure	B wait until evaluation before considering it	C write measurable or observable criteria and list realistic constraints
--	---	--

3. Which risk does this section help the student recognise?

A the website changing colour	B having to explain a justified choice	C vague criteria make evaluation unsupported
-------------------------------	--	--

4. Which correction best addresses the misconception “criteria and constraints mean the same thing”?

A the misconception is always correct	B evidence and criteria are unnecessary	C criteria judge success; constraints are the limits on the work
---------------------------------------	---	--

Your score after checking the answer key: ____ / 4 One idea to revisit: _____

MODULE 1 · EXPLAIN

Guided response · 1.3 Criteria and constraints

Your task: Write three testable success criteria and two realistic constraints for your Riv Burger.

Write three qualities you can actually check, then two limits you must work within.

1 Select the precise theory and evidence that answer the question.	2 Explain the connection using subject vocabulary and a clear because, so or therefore link.	3 Check that every part of the prompt is answered and that claims are specific.
--	--	---

Sentence starter: My burger will be successful if... A constraint I must work within is...

Appropriate response example: One criterion is that the assembled burger remains stable when lifted and eaten. Two constraints are the available practical-lesson time and the equipment provided in the food room.

YOUR RESPONSE

Self-check: ☐ I answered every part ☐ I used subject vocabulary ☐ I linked claims with because, so or therefore ☐ I checked specificity

MODULE 1 · APPLY

Project activity 1 · Brief and criteria studio

Translate the design situation into student language, then write criteria you can actually test.

WHAT NEED OR OPPORTUNITY IS THE BURGER RESPONDING TO?

INTENDED USER AND THEIR NEEDS

IMPORTANT CONSTRAINTS

THREE TESTABLE CRITERIA WRITTEN AS COMPLETE STATEMENTS

Evidence checkpoint: Ask your teacher how this paper evidence should be stored or submitted. Formal submission arrangements are Teacher to confirm.

MODULE 02

Safe food practices

Protect people by controlling hygiene and food-production risks.

Visual focus for Module 2: Safe food practices.

YOU WILL LEARN

- 2.1 Personal hygiene
- 2.2 Cross-contamination
- 2.3 Hazards and controls

EVIDENCE CHECKPOINT

- 3 theory sections
- 12 knowledge-check questions
- 3 guided written responses
- 1 project activity

Teacher to confirm: Lesson timing, practical arrangements, ingredients, equipment, dietary and allergen requirements, supervision and formal submission details.

MODULE 2 · READ

2.1 Personal hygiene

Food handlers can transfer microorganisms, hair, dirt and allergens to food. Before production, secure hair, remove or control jewellery as directed, cover cuts, wear the required protective clothing, and wash hands thoroughly with soap and running water before drying them. Wash hands again after touching raw food, waste, your face or hair, and after any task that may contaminate them.

Course infographic: Safe food practices.

Stop and think: Underline two subject words in the theory. In the margin, write how each word connects to your burger project.

CHECK YOUR UNDERSTANDING

1. Which statement best defines personal hygiene?

A actions that prevent a food handler transferring contamination to food	B a decorative feature with no effect on the product	C a task completed only after the final practical
--	--	---

2. Which action best applies the theory?

A wash hands only at the end of the lesson	B wait until evaluation before considering it	C secure hair, cover cuts, wear required protection and wash and dry hands correctly
--	---	--

3. Which risk does this section help the student recognise?

A the website changing colour	B having to explain a justified choice	C touching raw food, waste, hair or the face can contaminate hands again
-------------------------------	--	--

4. Which correction best addresses the misconception “clean-looking hands are always safe”?

A the misconception is always correct	B evidence and criteria are unnecessary	C hands must be washed at required times even when they look clean
---------------------------------------	---	--

Your score after checking the answer key: ____ / 4 One idea to revisit: _____

MODULE 2 · EXPLAIN

Guided response · 2.1 Personal hygiene

Your task: Write your before-cooking hygiene routine as a clear six-step checklist.

Give six ordered actions you personally complete before touching ingredients or equipment.

1 Select the precise theory and evidence that answer the question.	2 Explain the connection using subject vocabulary and a clear because, so or therefore link.	3 Check that every part of the prompt is answered and that claims are specific.
--	--	---

Sentence starter: Before cooking I will: 1... 2... 3...

Appropriate response example: Before cooking I will secure my hair, remove or control jewellery as directed, cover cuts, put on protective clothing, wash my hands with soap and running water, then dry them correctly.

YOUR RESPONSE

Self-check: ☐ I answered every part ☐ I used subject vocabulary ☐ I linked claims with because, so or therefore ☐ I checked specificity

MODULE 2 · READ

2.2 Cross-contamination

Cross-contamination happens when harmful microorganisms or allergens move from one food, surface, tool or person to another. Keep raw ingredients separate from ready-to-eat foods. Use the colour-coded boards and equipment directed by your teacher, clean and sanitise work areas, and never reuse a utensil that has touched raw food without washing it correctly.

Non-negotiable: follow teacher instructions for storage, cooking, cooling and allergen controls. If unsure, stop and ask.

Stop and think: Underline two subject words in the theory. In the margin, write how each word connects to your burger project.

CHECK YOUR UNDERSTANDING

1. Which statement best defines cross-contamination?

A the transfer of harmful microorganisms or allergens between food, people, tools or surfaces	B a decorative feature with no effect on the product	C a task completed only after the final practical
---	--	---

2. Which action best applies the theory?

A reuse a raw-food utensil for salad without washing it	B wait until evaluation before considering it	C separate raw and ready-to-eat foods and use cleaned, sanitised equipment
---	---	--

3. Which risk does this section help the student recognise?

A the website changing colour	B having to explain a justified choice	C hands, boards, knives or benches can carry contamination
-------------------------------	--	--

4. Which correction best addresses the misconception “rinsing a contaminated utensil briefly makes it safe”?

A the misconception is always correct	B evidence and criteria are unnecessary	C equipment must be washed and sanitised as instructed before reuse
---------------------------------------	---	---

Your score after checking the answer key: ____ / 4 One idea to revisit: _____

MODULE 2 · EXPLAIN

Guided response · 2.2 Cross-contamination

Your task: Explain how cross-contamination could occur during burger production and give three controls that break the pathway.

Describe one realistic transfer pathway, then show exactly where three actions would stop it.

1 Select the precise theory and evidence that answer the question.	2 Explain the connection using subject vocabulary and a clear because, so or therefore link.	3 Check that every part of the prompt is answered and that claims are specific.
--	--	---

Sentence starter: Cross-contamination could occur when... This pathway is controlled by...

Appropriate response example: Microorganisms could move from raw food to a knife and then to salad. Separate colour-coded equipment, correct handwashing and cleaning and sanitising the bench would break that pathway.

YOUR RESPONSE

Self-check: ☐ I answered every part ☐ I used subject vocabulary ☐ I linked claims with because, so or therefore ☐ I checked specificity

MODULE 2 · READ

2.3 Hazards and controls

A hazard is something with the potential to cause harm. A risk control reduces the chance or severity of that harm. Knife controls include a stable board, correct grip, a safe cutting technique, full attention and carrying the knife only as instructed.

Heat controls include dry oven mitts, clear handles and warning others about hot equipment. Safety also includes garden work: use gloves and follow instructions when handling potting mix, minimise dust, work in ventilation and wash hands afterwards.

Stop and think: Underline two subject words in the theory. In the margin, write how each word connects to your burger project.

CHECK YOUR UNDERSTANDING

1. Which statement best defines risk control?

A an action that reduces the chance or severity of harm	B a decorative feature with no effect on the product	C a task completed only after the final practical
---	--	---

2. Which action best applies the theory?

A name a hazard without changing how the task is performed	B wait until evaluation before considering it	C match each identified hazard with a specific control
--	---	--

3. Which risk does this section help the student recognise?

A the website changing colour	B having to explain a justified choice	C unstable boards, hidden knives, hot equipment or potting-mix dust can cause harm
-------------------------------	--	--

4. Which correction best addresses the misconception “a hazard disappears once it is written down”?

A the misconception is always correct	B evidence and criteria are unnecessary	C risk is reduced only when an effective control is applied
---------------------------------------	---	---

Your score after checking the answer key: ____ / 4 One idea to revisit: _____

MODULE 2 · EXPLAIN

Guided response · 2.3 Hazards and controls

Your task: Identify one biological, one physical and one heat or equipment hazard. Give a specific control for each.

Name three different hazards, then pair each one with an action that reduces its risk.

1 Select the precise theory and evidence that answer the question.	2 Explain the connection using subject vocabulary and a clear because, so or therefore link.	3 Check that every part of the prompt is answered and that claims are specific.
--	--	---

Sentence starter: One biological hazard is... I will control it by...

Appropriate response example: A physical hazard is a knife slipping on an unstable board. I will use the instructed grip and cutting method on a board secured with a damp cloth.

YOUR RESPONSE

Self-check: ☐ I answered every part ☐ I used subject vocabulary ☐ I linked claims with because, so or therefore ☐ I checked specificity

MODULE 2 · APPLY

Project activity 2 · Safety scenario lab

For each situation, identify the hazard or contamination path and give a specific control.

Situation	Hazard or problem	Specific control
Raw patty mixture and salad are prepared on the same board.		
A wet oven mitt is beside a hot tray.		
A spill is left in the walkway.		

Evidence checkpoint: Ask your teacher how this paper evidence should be stored or submitted. Formal submission arrangements are Teacher to confirm.

MODULE 03

Tools and workflow

Prepare an efficient workstation and use tools for their intended purpose.

Visual focus for Module 3: Tools and workflow.

YOU WILL LEARN

- 3.1 Mise en place
- 3.2 Selecting tools
- 3.3 A clean workflow

EVIDENCE CHECKPOINT

- 3 theory sections
- 12 knowledge-check questions
- 3 guided written responses
- 1 project activity

Teacher to confirm: Lesson timing, practical arrangements, ingredients, equipment, dietary and allergen requirements, supervision and formal submission details.

MODULE 3 · READ

3.1 Mise en place

Mise en place means putting everything in place before production. Read the complete method, wash hands, sanitise the bench, collect and check equipment, measure ingredients, prepare waste containers and preheat equipment only when instructed. This preparation reduces rushing and helps you notice missing ingredients or unsafe conditions before they become problems.

A WORKPLAN PROTECTS THE WHOLE LESSON

Teacher confirms the actual lesson time, date and supplied ingredients.

Course infographic: Tools and workflow.

Stop and think: Underline two subject words in the theory. In the margin, write how each word connects to your burger project.

CHECK YOUR UNDERSTANDING

1. Which statement best defines mise en place?

A putting ingredients, equipment and the work area in place before production	B a decorative feature with no effect on the product	C a task completed only after the final practical
---	--	---

2. Which action best applies the theory?

A start cooking before checking the complete method	B wait until evaluation before considering it	C read the method, prepare the bench, collect tools and measure ingredients
---	---	---

3. Which risk does this section help the student recognise?

A the website changing colour	B having to explain a justified choice	C missing tools or ingredients can cause unsafe rushing
-------------------------------	--	---

4. Which correction best addresses the misconception “mise en place means only measuring ingredients”?

A the misconception is always correct	B evidence and criteria are unnecessary	C it includes the method, hygiene, equipment, ingredients, waste and safe setup
---------------------------------------	---	---

Your score after checking the answer key: ____ / 4 One idea to revisit: _____

MODULE 3 · EXPLAIN

Guided response · 3.1 Mise en place

Your task: Describe how you would set up a safe workstation for preparing a burger patty and fresh salad.

Explain the layout and preparation steps that keep raw preparation, salad and equipment organised.

1 Select the precise theory and evidence that answer the question.	2 Explain the connection using subject vocabulary and a clear because, so or therefore link.	3 Check that every part of the prompt is answered and that claims are specific.
---	---	--

Sentence starter: I will begin by... The raw-food area will... The salad area will...

Appropriate response example: I will sanitise the bench, collect the demonstrated tools and place separate equipment for raw preparation and salad. Ingredients will be measured, waste containers prepared and the full method checked before cooking begins.

YOUR RESPONSE

Self-check: ☐ I answered every part ☐ I used subject vocabulary ☐ I linked claims with because, so or therefore ☐ I checked specificity

MODULE 3 · READ

3.2 Selecting tools

Select a tool because its function suits the job. A cook's knife can chop larger ingredients; a small knife provides control for smaller preparation; measuring spoons suit small quantities; a digital scale measures mass; and a spatula can turn a patty while keeping hands away from heat. Use every tool only after demonstration and according to classroom rules.

Stop and think: Underline two subject words in the theory. In the margin, write how each word connects to your burger project.

CHECK YOUR UNDERSTANDING

1. Which statement best defines tool selection?

A choosing equipment because its function suits the required task	B a decorative feature with no effect on the product	C a task completed only after the final practical
---	--	---

2. Which action best applies the theory?

A choose a tool only because it is nearby	B wait until evaluation before considering it	C match the cook's knife, small knife, scale, spoons or spatula to its intended job
---	---	---

3. Which risk does this section help the student recognise?

A the website changing colour	B having to explain a justified choice	C an unsuitable tool can reduce control or create a hazard
-------------------------------	--	--

4. Which correction best addresses the misconception "one knife is automatically suitable for every cutting task"?

A the misconception is always correct	B evidence and criteria are unnecessary	C tool size and function should match the ingredient and operation
---------------------------------------	---	--

Your score after checking the answer key: ____ / 4 One idea to revisit: _____

MODULE 3 · EXPLAIN

Guided response · 3.2 Selecting tools

Your task: Choose four tools for your likely recipe. Explain the function of each and one safe-use point.

For each tool, say what task it performs and one behaviour that keeps its use safe.

1 Select the precise theory and evidence that answer the question.	2 Explain the connection using subject vocabulary and a clear because, so or therefore link.	3 Check that every part of the prompt is answered and that claims are specific.
--	--	---

Sentence starter: I will use a... to... A safe-use point is...

Appropriate response example: I will use a digital scale to measure mass accurately and keep it dry and stable. A spatula will turn the patty while keeping my hands away from the hot cooking surface.

YOUR RESPONSE

Self-check: ☐ I answered every part ☐ I used subject vocabulary ☐ I linked claims with because, so or therefore ☐ I checked specificity

MODULE 3 · READ

3.3 A clean workflow

Plan movement from preparation to cooking, assembly and cleaning. Keep handles away from bench edges, wipe spills promptly, return ingredients to safe storage, and clean as you go without placing sharp tools into hidden washing-up water. At the end, wash, rinse and dry equipment as directed, sanitise the workstation and complete the teacher's practical checklist.

Stop and think: Underline two subject words in the theory. In the margin, write how each word connects to your burger project.

CHECK YOUR UNDERSTANDING

1. Which statement best defines clean workflow?

A an ordered movement from preparation through cooking, assembly and cleaning	B a decorative feature with no effect on the product	C a task completed only after the final practical
---	--	---

2. Which action best applies the theory?

A hide sharp tools in washing-up water	B wait until evaluation before considering it	C clean as you go, manage spills and return ingredients to safe storage
--	---	---

3. Which risk does this section help the student recognise?

A the website changing colour	B having to explain a justified choice	C spills, projecting handles and clutter can cause injury or contamination
-------------------------------	--	--

4. Which correction best addresses the misconception “cleaning only matters after the burger is finished”?

A the misconception is always correct	B evidence and criteria are unnecessary	C cleaning and safe storage occur throughout production
---------------------------------------	---	---

Your score after checking the answer key: ____ / 4 One idea to revisit: _____

MODULE 3 · EXPLAIN

Guided response · 3.3 A clean workflow

Your task: Plan a clean workflow from preparation to final workstation check. Explain how it prevents two problems.

Put the major stages in order and connect two clean-as-you-go actions to the problems they prevent.

1 Select the precise theory and evidence that answer the question.	2 Explain the connection using subject vocabulary and a clear because, so or therefore link.	3 Check that every part of the prompt is answered and that claims are specific.
--	--	---

Sentence starter: My workflow moves from... to... Cleaning... prevents...

Appropriate response example: My workflow moves from separated preparation areas to cooking, assembly and cleaning. Wiping spills promptly prevents slips, while returning chilled ingredients to storage reduces time at unsafe conditions.

YOUR RESPONSE

Self-check: ☐ I answered every part ☐ I used subject vocabulary ☐ I linked claims with because, so or therefore ☐ I checked specificity

MODULE 3 · APPLY

Project activity 3 · Practical readiness checklist

Turn the supplied practical checklist into a routine you can follow without rushing.

BEFORE COOKING · SIX ACTIONS

DURING COOKING · FOUR CONTROLS

CLEANING AND PACK-UP · SIX ACTIONS

WHEN WILL YOU STOP AND ASK THE TEACHER?

Evidence checkpoint: Ask your teacher how this paper evidence should be stored or submitted. Formal submission arrangements are Teacher to confirm.

MODULE 04

Burger anatomy

Use structure and sensory properties to make the product work.

Visual focus for Module 4: Burger anatomy.

YOU WILL LEARN

- 4.1 A layered food system
- 4.2 Sensory properties
- 4.3 Function and stability

EVIDENCE CHECKPOINT

- 3 theory sections
- 12 knowledge-check questions
- 3 guided written responses
- 1 project activity

Teacher to confirm: Lesson timing, practical arrangements, ingredients, equipment, dietary and allergen requirements, supervision and formal submission details.

MODULE 4 · READ

4.1 A layered food system

A burger is a system of interacting parts. The bun contains the product and gives structure. The main filling provides body and a central flavour. Fresh components add colour, texture and freshness.

Sauces add moisture and flavour but can also make the bun soggy. Each layer affects the whole product. Top bun · hold and protect Fresh layer · colour and crunch Sauce · flavour and moisture Main filling · body and protein Base bun · stable foundation

Course infographic: Burger anatomy.

Stop and think: Underline two subject words in the theory. In the margin, write how each word connects to your burger project.

CHECK YOUR UNDERSTANDING

1. Which statement best defines layered food system?

A interacting burger parts in which each layer affects the whole product	B a decorative feature with no effect on the product	C a task completed only after the final practical
--	--	---

2. Which action best applies the theory?

A add layers without considering how they interact	B wait until evaluation before considering it	C give every layer a clear function and arrange it deliberately
--	---	---

3. Which risk does this section help the student recognise?

A the website changing colour	B having to explain a justified choice	C excess moisture or poorly matched layers can weaken the whole product
-------------------------------	--	---

4. Which correction best addresses the misconception “each layer can be designed independently”?

A the misconception is always correct	B evidence and criteria are unnecessary	C a change to one layer can affect stability, texture, moisture and flavour elsewhere
---------------------------------------	---	---

Your score after checking the answer key: ____ / 4 One idea to revisit: _____

Your task: Plan a burger stack from bottom to top. Explain the function of each layer.

1

2

3

Sentence starter: From the base upward, my burger contains... The base layer functions to...

YOUR RESPONSE

[illegible]

MODULE 4 · READ

4.2 Sensory properties

Sensory properties are features detected by the senses: appearance, aroma, flavour, texture and sound. Designers can create contrast—such as a crisp vegetable with a soft bun—but too many competing flavours or textures can make the product confusing. Use precise words in evaluation: golden, crisp, juicy, smoky, fresh, balanced or overly salty are more useful than “good”.

Stop and think: Underline two subject words in the theory. In the margin, write how each word connects to your burger project.

CHECK YOUR UNDERSTANDING

1. Which statement best defines sensory property?

A a product feature detected through appearance, aroma, flavour, texture or sound	B a decorative feature with no effect on the product	C a task completed only after the final practical
---	--	---

2. Which action best applies the theory?

A evaluate every feature only as “good”	B wait until evaluation before considering it	C use exact sensory vocabulary and plan complementary contrasts
---	---	---

3. Which risk does this section help the student recognise?

A the website changing colour	B having to explain a justified choice	C too many competing flavours or textures can make the product confusing
-------------------------------	--	--

4. Which correction best addresses the misconception “sensory evaluation is only personal liking”?

A the misconception is always correct	B evidence and criteria are unnecessary	C it uses precise observations across several senses
---------------------------------------	---	--

Your score after checking the answer key: ____ / 4 One idea to revisit: _____

MODULE 4 · EXPLAIN

Guided response · 4.2 Sensory properties

Your task: Write a sensory profile for your intended burger using precise appearance, aroma, flavour and texture words.

Describe what a user should see, smell, taste and feel; use exact words rather than opinions alone.

1 Select the precise theory and evidence that answer the question.	2 Explain the connection using subject vocabulary and a clear because, so or therefore link.	3 Check that every part of the prompt is answered and that claims are specific.
--	--	---

Sentence starter: The burger will appear... Its aroma will... The flavour will... The texture will...

Appropriate response example: The burger will have a golden bun, fresh herb aroma, savoury filling and balanced tangy sauce. Crisp vegetables will contrast with the soft bun and juicy filling.

YOUR RESPONSE

Self-check: ☐ I answered every part ☐ I used subject vocabulary ☐ I linked claims with because, so or therefore ☐ I checked specificity

MODULE 4 · READ

4.3 Function and stability

Place wet ingredients away from surfaces that become soggy quickly, drain washed vegetables, match the bun size to the filling, and avoid layers that slide against each other. The base should sit flat and the assembled burger should remain comfortable to hold. A product can look appealing and still fail if it collapses, leaks or is difficult to eat.

Stop and think: Underline two subject words in the theory. In the margin, write how each word connects to your burger project.

CHECK YOUR UNDERSTANDING

1. Which statement best defines burger stability?

A the ability of the assembled product to remain together and comfortable to hold	B a decorative feature with no effect on the product	C a task completed only after the final practical
---	--	---

2. Which action best applies the theory?

A stack several wet, sliding layers directly on the base	B wait until evaluation before considering it	C drain vegetables, match component sizes and position wet or slippery layers carefully
--	---	---

3. Which risk does this section help the student recognise?

A the website changing colour	B having to explain a justified choice	C poor layer order can make the product difficult to eat
-------------------------------	--	--

4. Which correction best addresses the misconception “a taller burger is always a more successful burger”?

A the misconception is always correct	B evidence and criteria are unnecessary	C height must be balanced with ergonomics, stability and ease of eating
---------------------------------------	---	---

Your score after checking the answer key: ____ / 4 One idea to revisit: _____

MODULE 4 · EXPLAIN

Guided response · 4.3 Function and stability

Your task: Explain three design decisions that will improve your burger's stability and ease of eating.

Name three exact construction choices and connect each one to the problem it prevents.

1 Select the precise theory and evidence that answer the question.	2 Explain the connection using subject vocabulary and a clear because, so or therefore link.	3 Check that every part of the prompt is answered and that claims are specific.
--	--	---

Sentence starter: I will improve stability by... This prevents...

Appropriate response example: I will drain washed vegetables to limit excess moisture, match the patty to the bun diameter and place slippery sauce away from other sliding layers so the burger remains firm when lifted.

YOUR RESPONSE

Self-check: ☐ I answered every part ☐ I used subject vocabulary ☐ I linked claims with because, so or therefore ☐ I checked specificity

MODULE 4 · APPLY

Project activity 4 · Burger deconstruction lab

Deconstruct a burger into functional layers, then consider taste, nutrition, appearance, price and stability.

Layer	Chosen ingredient	Function and sensory effect	Possible problem
Top and base			
Main filling			
Fresh ingredients			
Sauce and herbs			

Evidence checkpoint: Ask your teacher how this paper evidence should be stored or submitted. Formal submission arrangements are Teacher to confirm.

MODULE 05

Ingredients and agriculture

Trace ingredients to industries, producers and places.

Visual focus for Module 5: Ingredients and agriculture.

YOU WILL LEARN

- 5.1 From primary production to plate
- 5.2 Local and seasonal choices
- 5.3 Ethical and environmental factors

EVIDENCE CHECKPOINT

- 3 theory sections
- 12 knowledge-check questions
- 3 guided written responses
- 1 project activity

Teacher to confirm: Lesson timing, practical arrangements, ingredients, equipment, dietary and allergen requirements, supervision and formal submission details.

MODULE 5 · READ

5.1 From primary production to plate

Agriculture supplies plant and animal products. Wheat may be milled into flour for buns; cattle or legumes may supply a patty ingredient; dairy farming supplies milk for cheese; and horticulture supplies vegetables and herbs. Processing, packaging, transport, retail and food service connect primary production to the burger.

TRACE THE INGREDIENT JOURNEY

A strong “local” claim names the producer, place and evidence.

Compare the whole system—not only the label.

Course infographic: Ingredients and agriculture.

Stop and think: Underline two subject words in the theory. In the margin, write how each word connects to your burger project.

CHECK YOUR UNDERSTANDING

1. Which statement best defines food system?

A the connected stages from primary production through processing, transport, retail and service	B a decorative feature with no effect on the product	C a task completed only after the final practical
--	--	---

2. Which action best applies the theory?

A treat the supermarket as the original source of every ingredient	B wait until evaluation before considering it	C link each ingredient to its agricultural industry and later journey stages
--	---	--

3. Which risk does this section help the student recognise?

A the website changing colour	B having to explain a justified choice	C missing stages can lead to unsupported origin or sustainability claims
-------------------------------	--	--

4. Which correction best addresses the misconception “processing and transport are part of primary production”?

A the misconception is always correct	B evidence and criteria are unnecessary	C they connect primary production to the final food product
---------------------------------------	---	---

Your score after checking the answer key: ____ / 4 One idea to revisit: _____

Your task: Choose four likely burger ingredients. Trace each to an agricultural industry and identify one processing or transport step.

1 Select the precise theory and evidence that answer the question.	2 Explain the connection using subject vocabulary and a clear because, so or therefore link.	3 Check that every part of the prompt is answered and that claims are specific.
--	--	---

Appropriate response example: A wheat bun begins with grain production. The wheat is milled into flour, processed into bread and transported before the bun is supplied for burger production.

[illegible]

Food and agricultural practices · Page 38 · Teacher to confirm local arrangements

MODULE 5 · READ

5.2 Local and seasonal choices

“Local” should be supported by evidence, not used as a vague label. It may refer to a grower, producer or business within a defined region.

Seasonal produce can be plentiful and suitable for local conditions, but availability and price still need checking. Research the producer, ingredient origin, distance, season and the evidence used to make each claim.

Stop and think: Underline two subject words in the theory. In the margin, write how each word connects to your burger project.

CHECK YOUR UNDERSTANDING

1. Which statement best defines local food claim?

A a claim supported by a defined region and evidence of producer or ingredient origin	B a decorative feature with no effect on the product	C a task completed only after the final practical
---	--	---

2. Which action best applies the theory?

A call an ingredient local because its packaging is green	B wait until evaluation before considering it	C define the region and verify producer, origin, distance and season
---	---	--

3. Which risk does this section help the student recognise?

A the website changing colour	B having to explain a justified choice	C unverified language can mislead the user
-------------------------------	--	--

4. Which correction best addresses the misconception “seasonal automatically means inexpensive and available”?

A the misconception is always correct	B evidence and criteria are unnecessary	C availability and price still need current checking
---------------------------------------	---	--

Your score after checking the answer key: ____ / 4 One idea to revisit: _____

MODULE 5 · EXPLAIN

Guided response · 5.2 Local and seasonal choices

Your task: Define what “local” will mean in your design, then record the evidence you would need to support two local ingredient claims.

Set a clear geographic meaning, then name the proof required for two actual ingredients.

1 Select the precise theory and evidence that answer the question.	2 Explain the connection using subject vocabulary and a clear because, so or therefore link.	3 Check that every part of the prompt is answered and that claims are specific.
--	--	---

Sentence starter: For this project, local means... I would verify... by...

Appropriate response example: For this project, local means produced within the Riverina region. I would verify lettuce and cheese claims using supplier or producer information that identifies where each ingredient was grown or made.

YOUR RESPONSE

Self-check: ☐ I answered every part ☐ I used subject vocabulary ☐ I linked claims with because, so or therefore ☐ I checked specificity

MODULE 5 · READ

5.3 Ethical and environmental factors

Food choices can affect soil, water, biodiversity, animal welfare, energy use, packaging, transport and waste. No ingredient is automatically perfect.

A responsible comparison considers reliable evidence and the full production system. Practical actions include planning quantities, using suitable portions, choosing reusable equipment, separating waste as directed and using garden produce effectively.

Stop and think: Underline two subject words in the theory. In the margin, write how each word connects to your burger project.

CHECK YOUR UNDERSTANDING

1. Which statement best defines responsible food choice?

A a choice that considers environmental, ethical and practical effects across the production system	B a decorative feature with no effect on the product	C a task completed only after the final practical
---	--	---

2. Which action best applies the theory?

A declare an ingredient perfect without investigating its production system	B wait until evaluation before considering it	C compare evidence about soil, water, welfare, energy, packaging, transport and waste
---	---	---

3. Which risk does this section help the student recognise?

A the website changing colour	B having to explain a justified choice	C single-factor claims can hide important impacts elsewhere
-------------------------------	--	---

4. Which correction best addresses the misconception “one label proves an ingredient is sustainable in every way”?

A the misconception is always correct	B evidence and criteria are unnecessary	C responsibility depends on evidence, context and multiple factors
---------------------------------------	---	--

Your score after checking the answer key: ____ / 4 One idea to revisit: _____

MODULE 5 · EXPLAIN

Guided response · 5.3 Ethical and environmental factors

Your task: Compare two possible ingredients using two environmental or ethical factors, then justify the more responsible choice.

Use the same two factors for both ingredients, acknowledge a trade-off and explain your decision.

1 Select the precise theory and evidence that answer the question.	2 Explain the connection using subject vocabulary and a clear because, so or therefore link.	3 Check that every part of the prompt is answered and that claims are specific.
--	--	---

Sentence starter: I compared... and... using... Although..., I would choose... because...

Appropriate response example: I compared two herb sources using transport and packaging. A school-grown herb may reduce packaging and travel, although its availability must be confirmed; I would choose it when safely available because it supports the brief and reduces those impacts.

YOUR RESPONSE

Self-check: ☐ I answered every part ☐ I used subject vocabulary ☐ I linked claims with because, so or therefore ☐ I checked specificity

MODULE 5 · APPLY

Project activity 5 · Ingredient journey investigation

Choose two plant ingredients and two animal or animal-alternative ingredients. Use reliable sources and record the URL - do not invent figures.

Ingredient	Agricultural industry and NSW location	Production journey	Evidence URL

DEFINE LOCAL FOR THIS INVESTIGATION AND EXPLAIN HOW YOU CHECKED THE CLAIM

Evidence checkpoint: Ask your teacher how this paper evidence should be stored or submitted. Formal submission arrangements are Teacher to confirm.

MODULE 06

Develop your design

Generate alternatives, test them against criteria and justify a direction.

Visual focus for Module 6: Develop your design.

YOU WILL LEARN

- 6.1 Divergent thinking
- 6.2 Annotating concepts
- 6.3 Choosing with evidence

EVIDENCE CHECKPOINT

- 3 theory sections
- 12 knowledge-check questions
- 3 guided written responses
- 1 project activity

Teacher to confirm: Lesson timing, practical arrangements, ingredients, equipment, dietary and allergen requirements, supervision and formal submission details.

MODULE 6 · READ

6.1 Divergent thinking

Do not stop at the first idea. Generate several distinct burger concepts by changing the main filling, bun, herbs, vegetables, sauce, form or flavour profile. Four genuinely different options create a stronger comparison than four drawings of almost the same product.

MAKE FOUR IDEAS GENUINELY DIFFERENT

CONCEPT A

Main filling: _____

Garden herb: _____

Structure: _____

CONCEPT B

Main filling: _____

Garden herb: _____

Flavour: _____

CONCEPT C

Main filling: _____

Garden herb: _____

User need: _____

CONCEPT D

Main filling: _____

Garden herb: _____

Local feature: _____

Course infographic: Develop your design.

Stop and think: Underline two subject words in the theory. In the margin, write how each word connects to your burger project.

CHECK YOUR UNDERSTANDING

1. Which statement best defines divergent thinking?

A generating several meaningfully different responses before selecting one	B a decorative feature with no effect on the product	C a task completed only after the final practical
--	--	---

2. Which action best applies the theory?

A redraw the same burger four times with different labels	B wait until evaluation before considering it	C change filling, bun, herbs, vegetables, sauce, form or flavour direction
---	---	--

3. Which risk does this section help the student recognise?

A the website changing colour	B having to explain a justified choice	C early fixation may hide a stronger solution
-------------------------------	--	---

4. Which correction best addresses the misconception “small colour changes make concepts genuinely different”?

A the misconception is always correct	B evidence and criteria are unnecessary	C options should change ingredients, form, function or flavour in a meaningful way
---------------------------------------	---	--

Your score after checking the answer key: ____ / 4 One idea to revisit: _____

MODULE 6 · EXPLAIN

Guided response · 6.1 Divergent thinking

Your task: Describe four distinct burger concepts. For each, identify the main filling, local or garden feature and flavour direction.

Create four real alternatives, not four versions of one idea, and name the three required features for each.

1 Select the precise theory and evidence that answer the question.	2 Explain the connection using subject vocabulary and a clear because, so or therefore link.	3 Check that every part of the prompt is answered and that claims are specific.
--	--	---

Sentence starter: Concept A uses... Its local or garden feature is... The flavour direction is...

Appropriate response example: Concept A uses a flat legume patty, garden parsley and a fresh lemon-yoghurt flavour. Concept B uses a different filling and herb combination so it can be compared as a genuine alternative.

YOUR RESPONSE

Self-check: ☐ I answered every part ☐ I used subject vocabulary ☐ I linked claims with because, so or therefore ☐ I checked specificity

MODULE 6 · READ

6.2 Annotating concepts

An annotation explains a design decision. Label ingredients, layer order, sensory effect, source, function, safety issue or expected user benefit. “Parsley yoghurt sauce adds freshness and uses a garden herb” communicates more than an arrow labelled “sauce”.

Stop and think: Underline two subject words in the theory. In the margin, write how each word connects to your burger project.

CHECK YOUR UNDERSTANDING

1. Which statement best defines design annotation?

A a note that explains the reason, function or expected effect of a design decision	B a decorative feature with no effect on the product	C a task completed only after the final practical
---	--	---

2. Which action best applies the theory?

A draw an arrow and write only “sauce”	B wait until evaluation before considering it	C label ingredients, layer order, sensory effect, source, safety and user benefit
--	---	---

3. Which risk does this section help the student recognise?

A the website changing colour	B having to explain a justified choice	C unexplained drawings provide weak evidence of design thinking
-------------------------------	--	---

4. Which correction best addresses the misconception “an annotation only names what is shown”?

A the misconception is always correct	B evidence and criteria are unnecessary	C a strong annotation explains why the feature matters
---------------------------------------	---	--

Your score after checking the answer key: ____ / 4 One idea to revisit: _____

MODULE 6 · EXPLAIN

Guided response · 6.2 Annotating concepts

Your task: Write six purposeful annotations for one concept. Cover function, sensory effect, sourcing and a user benefit.

Write six short explanations that say what a feature does or why it was chosen; do not merely name it.

1 Select the precise theory and evidence that answer the question.	2 Explain the connection using subject vocabulary and a clear because, so or therefore link.	3 Check that every part of the prompt is answered and that claims are specific.
--	--	---

Sentence starter: The... is positioned here because... This gives the user...

Appropriate response example: The drained lettuce sits above the base bun to add crisp texture without excessive moisture. The parsley sauce uses a garden herb and adds a fresh flavour contrast.

YOUR RESPONSE

Self-check: ☐ I answered every part ☐ I used subject vocabulary ☐ I linked claims with because, so or therefore ☐ I checked specificity

MODULE 6 · READ

6.3 Choosing with evidence

Use your criteria to compare options. A decision matrix can make trade-offs visible, but scores need reasons. The highest total does not remove your responsibility to explain why the chosen design best fits the brief and constraints.

Appropriate response example: “I selected Concept C because its flat patty and matching bun improve stability, while garden parsley supports the brief. I will reduce the sauce quantity to control sogginess.”

Stop and think: Underline two subject words in the theory. In the margin, write how each word connects to your burger project.

CHECK YOUR UNDERSTANDING

1. Which statement best defines evidence-based selection?

A choosing a concept by comparing it with criteria and explaining trade-offs	B a decorative feature with no effect on the product	C a task completed only after the final practical
--	--	---

2. Which action best applies the theory?

A select the highest total without checking the reasons behind it	B wait until evaluation before considering it	C score options, give reasons and identify a needed refinement
---	---	--

3. Which risk does this section help the student recognise?

A the website changing colour	B having to explain a justified choice	C unsupported scores can create a false appearance of objectivity
-------------------------------	--	---

4. Which correction best addresses the misconception “the decision matrix makes the final decision automatically”?

A the misconception is always correct	B evidence and criteria are unnecessary	C the designer must interpret the scores and explain the choice
---------------------------------------	---	---

Your score after checking the answer key: ____ / 4 One idea to revisit: _____

MODULE 6 · EXPLAIN

Guided response · 6.3 Choosing with evidence

Your task: Select one concept. Justify it against at least four criteria and identify one change needed before production.

Name the chosen concept, use four specific criteria as evidence and finish with one precise refinement.

1 Select the precise theory and evidence that answer the question.	2 Explain the connection using subject vocabulary and a clear because, so or therefore link.	3 Check that every part of the prompt is answered and that claims are specific.
--	--	---

Sentence starter: I selected Concept... because it best meets... It needs one change:...

Appropriate response example: I selected Concept C because its matching bun and patty improve stability, its garden herb answers the brief and its method fits the lesson. I will reduce the sauce quantity to control sogginess.

YOUR RESPONSE

Self-check: ☐ I answered every part ☐ I used subject vocabulary ☐ I linked claims with because, so or therefore ☐ I checked specificity

MODULE 6 · APPLY

Project activity 6 · Four-concept design studio

Create four genuinely different burger options. Annotate how each responds to the brief.

CONCEPT A · FILLING, BUN, HERB, VEGETABLES, FLAVOUR AND STRUCTURE

CONCEPT B · FILLING, BUN, HERB, VEGETABLES, FLAVOUR AND STRUCTURE

CONCEPT C · FILLING, BUN, HERB, VEGETABLES, FLAVOUR AND STRUCTURE

CONCEPT D · FILLING, BUN, HERB, VEGETABLES, FLAVOUR AND STRUCTURE

DECISION TIME · SELECT ONE CONCEPT AND JUSTIFY IT AGAINST AT LEAST FOUR CRITERIA

Evidence checkpoint: Ask your teacher how this paper evidence should be stored or submitted. Formal submission arrangements are Teacher to confirm.

MODULE 07

Garden to kitchen

Connect plant needs, herb production and responsible resource use.

Visual focus for Module 7: Garden to kitchen.

YOU WILL LEARN	EVIDENCE CHECKPOINT
7.1 What plants need 7.2 Growing and harvesting herbs 7.3 Sustainability in practice	3 theory sections 12 knowledge-check questions 3 guided written responses 1 project activity
Teacher to confirm: Lesson timing, practical arrangements, ingredients, equipment, dietary and allergen requirements, supervision and formal submission details.	

MODULE 7 · READ

7.1 What plants need

Healthy plants require light, water, air, suitable temperature, nutrients and a growing medium that supports roots. Too little water can cause wilting; too much can reduce oxygen around roots. Light and temperature affect growth, while nutrients support plant processes.

Course infographic: Garden to kitchen.

Stop and think: Underline two subject words in the theory. In the margin, write how each word connects to your burger project.

CHECK YOUR UNDERSTANDING

1. Which statement best defines plant need?

A a condition or resource required for healthy growth	B a decorative feature with no effect on the product	C a task completed only after the final practical
---	--	---

2. Which action best applies the theory?

A add more water whenever a plant looks unhealthy	B wait until evaluation before considering it	C manage light, water, air, temperature, nutrients and root conditions together
---	---	---

3. Which risk does this section help the student recognise?

A the website changing colour	B having to explain a justified choice	C too much water can reduce oxygen around roots
-------------------------------	--	---

4. Which correction best addresses the misconception “more of every resource always improves growth”?

A the misconception is always correct	B evidence and criteria are unnecessary	C both shortages and excesses can limit plant health
---------------------------------------	---	--

Your score after checking the answer key: ____ / 4 One idea to revisit: _____

MODULE 7 · EXPLAIN

Guided response · 7.1 What plants need

Your task: Explain how light, water, air, nutrients and soil or growing medium support a healthy herb plant.

Explain the job of each factor and show that the factors interact rather than working separately.

1 Select the precise theory and evidence that answer the question.	2 Explain the connection using subject vocabulary and a clear because, so or therefore link.	3 Check that every part of the prompt is answered and that claims are specific.
--	--	---

Sentence starter: Light supports... Water is needed for... The growing medium...

Appropriate response example: Light provides energy for plant growth, while water supports transport and plant processes. Air around leaves and roots is also required, so saturated growing medium can limit root oxygen even when water is available.

YOUR RESPONSE

Self-check: ☐ I answered every part ☐ I used subject vocabulary ☐ I linked claims with because, so or therefore ☐ I checked specificity

MODULE 7 · READ

7.2 Growing and harvesting herbs

Herbs such as parsley, basil or chives can add flavour, aroma and colour. Identify plants correctly, harvest only with permission, select healthy material, wash produce as instructed and use clean tools. Harvesting methods should allow the plant to continue growing where possible.

Stop and think: Underline two subject words in the theory. In the margin, write how each word connects to your burger project.

CHECK YOUR UNDERSTANDING

1. Which statement best defines responsible harvesting?

A collecting correctly identified healthy plant material while protecting safety and future growth	B a decorative feature with no effect on the product	C a task completed only after the final practical
--	--	---

2. Which action best applies the theory?

A taste an unknown plant to identify it	B wait until evaluation before considering it	C gain permission, identify the herb, use clean tools and wash produce as directed
---	---	--

3. Which risk does this section help the student recognise?

A the website changing colour	B having to explain a justified choice	C misidentification or dirty tools can create food-safety problems
-------------------------------	--	--

4. Which correction best addresses the misconception “anything growing in the school garden is automatically edible”?

A the misconception is always correct	B evidence and criteria are unnecessary	C only correctly identified and approved produce may be used
---------------------------------------	---	--

Your score after checking the answer key: ____ / 4 One idea to revisit: _____

Your task: Describe the safe path for an approved herb from the school garden to your burger.

1

2

3

Sentence starter: First, the herb must be... After permission is given... Before use...

YOUR RESPONSE

[illegible]

MODULE 7 · READ

7.3 Sustainability in practice

Sustainable practice aims to meet present needs while protecting future environmental, social and economic wellbeing. In a school garden and kitchen, this includes efficient watering, caring for soil, planning harvests, avoiding unnecessary food waste and valuing the work required to grow ingredients. A claim should connect an action to an effect—for example, measuring ingredients carefully can reduce avoidable waste.

Stop and think: Underline two subject words in the theory. In the margin, write how each word connects to your burger project.

CHECK YOUR UNDERSTANDING

1. Which statement best defines sustainable practice?

A meeting present needs while protecting future environmental, social and economic wellbeing	B a decorative feature with no effect on the product	C a task completed only after the final practical
--	--	---

2. Which action best applies the theory?

A harvest more produce than the recipe can use	B wait until evaluation before considering it	C water efficiently, care for soil, plan harvests and measure ingredients
--	---	---

3. Which risk does this section help the student recognise?

A the website changing colour	B having to explain a justified choice	C vague sustainability slogans do not show a real effect
-------------------------------	--	--

4. Which correction best addresses the misconception “an action is sustainable simply because it happens in a garden”?

A the misconception is always correct	B evidence and criteria are unnecessary	C its resource, environmental and social effects must be considered
---------------------------------------	---	---

Your score after checking the answer key: ____ / 4 One idea to revisit: _____

MODULE 7 · EXPLAIN

Guided response · 7.3 Sustainability in practice

Your task: Propose three realistic garden-to-kitchen sustainability actions and explain the likely effect of each.

For each action, explain what resource or problem it affects; three actions without effects are incomplete.

1 Select the precise theory and evidence that answer the question.	2 Explain the connection using subject vocabulary and a clear because, so or therefore link.	3 Check that every part of the prompt is answered and that claims are specific.
--	--	---

Sentence starter: One action is... This is likely to... because...

Appropriate response example: I will measure the herb quantity before harvesting. This reduces unnecessary picking and food waste while leaving more healthy growth available for later use.

YOUR RESPONSE

Self-check: ☐ I answered every part ☐ I used subject vocabulary ☐ I linked claims with because, so or therefore ☐ I checked specificity

MODULE 7 · APPLY

Project activity 7 · Herb and garden investigation

This activity adapts the teacher-posted herb worksheet and plant-needs reading.

CHOSEN HERB · APPEARANCE, EDIBLE PART AND FLAVOUR

FRESH, COOKED, DRIED, PASTE OR GARNISH USES

HOW AND WHEN IT IS BEST HARVESTED

LIGHT, WATER, SOIL, AIR, NUTRIENTS AND SPACING NEEDS

THREE LOCAL MEAT OR PLANT PRODUCERS AND THE EVIDENCE USED TO IDENTIFY THEM

GARDEN LAYOUT, PLANT LOCATIONS, SPACING AND WATERING METHOD · ACTUAL BED DIMENSIONS: TEACHER TO CONFIRM

Evidence checkpoint: Ask your teacher how this paper evidence should be stored or submitted. Formal submission arrangements are Teacher to confirm.

MODULE 08

Plan production

Turn the selected concept into an accurate, manageable production plan.

Visual focus for Module 8: Plan production.

YOU WILL LEARN

- 8.1 A production-ready recipe
- 8.2 Food order and resources
- 8.3 Workplan

EVIDENCE CHECKPOINT

- 3 theory sections
- 12 knowledge-check questions
- 3 guided written responses
- 1 project activity

Teacher to confirm: Lesson timing, practical arrangements, ingredients, equipment, dietary and allergen requirements, supervision and formal submission details.

MODULE 8 · READ

8.1 A production-ready recipe

A recipe must communicate exact ingredients, quantities and an ordered method. Use consistent units, name preparation requirements such as “finely chopped”, and include the yield. Sequence steps so preparation, cooking and assembly can happen safely within the available time.

A WORKPLAN PROTECTS THE WHOLE LESSON

Teacher confirms the actual lesson time, date and supplied ingredients.

Course infographic: Plan production.

Stop and think: Underline two subject words in the theory. In the margin, write how each word connects to your burger project.

CHECK YOUR UNDERSTANDING

1. Which statement best defines production-ready recipe?

A exact ingredients, quantities, yield and an ordered method that another cook can follow	B a decorative feature with no effect on the product	C a task completed only after the final practical
---	--	---

2. Which action best applies the theory?

A list ingredients without quantities or method order	B wait until evaluation before considering it	C use consistent units, preparation words and safe sequence
---	---	---

3. Which risk does this section help the student recognise?

A the website changing colour	B having to explain a justified choice	C ambiguous instructions can cause errors, waste or unsafe sequencing
-------------------------------	--	---

4. Which correction best addresses the misconception “a concept description is detailed enough to cook from”?

A the misconception is always correct	B evidence and criteria are unnecessary	C production requires precise quantities, preparation and sequence
---------------------------------------	---	--

Your score after checking the answer key: ____ / 4 One idea to revisit: _____

MODULE 8 · EXPLAIN

Guided response · 8.1 A production-ready recipe

Your task: Draft your recipe with yield, exact quantities and a numbered method. Include preparation words and safe sequencing.

Write instructions another student could follow without guessing amounts, order or preparation.

1 Select the precise theory and evidence that answer the question.	2 Explain the connection using subject vocabulary and a clear because, so or therefore link.	3 Check that every part of the prompt is answered and that claims are specific.
--	--	---

Sentence starter: Yield:... Ingredients:... Method: 1...

Appropriate response example: Yield: one burger. Ingredients include 10 g finely chopped parsley. The numbered method separates raw preparation, cooking and ready-to-eat assembly in a safe order.

YOUR RESPONSE

Self-check: ☐ I answered every part ☐ I used subject vocabulary ☐ I linked claims with because, so or therefore ☐ I checked specificity

MODULE 8 · READ

8.2 Food order and resources

A food order totals the ingredients required for the planned yield. Check what the school supplies and what must be ordered or brought, according to teacher directions. Avoid duplicates, use realistic quantities and identify any ingredient with an allergen or storage requirement.

Stop and think: Underline two subject words in the theory. In the margin, write how each word connects to your burger project.

CHECK YOUR UNDERSTANDING

1. Which statement best defines food order?

A a totalled list of ingredients required for the planned yield	B a decorative feature with no effect on the product	C a task completed only after the final practical
---	--	---

2. Which action best applies the theory?

A copy every possible ingredient without checking the final recipe	B wait until evaluation before considering it	C check supplies, total quantities and flag allergens or storage needs
--	---	--

3. Which risk does this section help the student recognise?

A the website changing colour	B having to explain a justified choice	C duplicates or unrealistic quantities increase cost and waste
-------------------------------	--	--

4. Which correction best addresses the misconception “the recipe and food order always show identical quantities”?

A the misconception is always correct	B evidence and criteria are unnecessary	C the order totals requirements across the planned yield or group need
---------------------------------------	---	--

Your score after checking the answer key: ____ / 4 One idea to revisit: _____

MODULE 8 · EXPLAIN

Guided response · 8.2 Food order and resources

Your task: Prepare a food order for your final recipe. Show totals, supply responsibility and any allergen or storage note.

Convert the recipe into one practical supply list and identify who supplies each item and what needs special handling.

1 Select the precise theory and evidence that answer the question.	2 Explain the connection using subject vocabulary and a clear because, so or therefore link.	3 Check that every part of the prompt is answered and that claims are specific.
--	--	---

Sentence starter: Ingredient... Total required... Supplied by... Special note...

Appropriate response example: Parsley: 10 g total; school garden, Teacher to confirm availability; wash as directed.
Yoghurt: measured total from the recipe; school supply, Teacher to confirm; keep chilled and note the dairy allergen.

YOUR RESPONSE

Self-check: ☐ I answered every part ☐ I used subject vocabulary ☐ I linked claims with because, so or therefore ☐ I checked specificity

MODULE 8 · READ

8.3 Workplan

A workplan maps time, activity, equipment and ingredients. Begin with hygiene and setup, identify tasks that can overlap safely, allow time for cooking and checking, and protect enough time for assembly, photography, cleaning and evaluation. Dates, lesson length, supplied ingredients and submission arrangements are Teacher to confirm .

Stop and think: Underline two subject words in the theory. In the margin, write how each word connects to your burger project.

CHECK YOUR UNDERSTANDING

1. Which statement best defines workplan?

A a timed map of activities, equipment and ingredients across the practical	B a decorative feature with no effect on the product	C a task completed only after the final practical
---	--	---

2. Which action best applies the theory?

A plan only the cooking and assembly steps	B wait until evaluation before considering it	C sequence tasks, identify safe overlaps and protect evidence and cleaning time
--	---	---

3. Which risk does this section help the student recognise?

A the website changing colour	B having to explain a justified choice	C missing setup, photography or cleaning time can leave evidence or safety incomplete
-------------------------------	--	---

4. Which correction best addresses the misconception “a workplan must be followed even when evidence shows a safe change is needed”?

A the misconception is always correct	B evidence and criteria are unnecessary	C it guides production and can be adapted safely with reasons recorded
---------------------------------------	---	--

Your score after checking the answer key: ____ / 4 One idea to revisit: _____

Your task: Create a timed workplan from setup to cleaning. Identify equipment, ingredients and one quality check at each major stage.

1

2

3

Sentence starter: At... minutes I will... using... I will check...

YOUR RESPONSE

[illegible]

Prepare the three connected records used in the class sequence: recipe, food order and workplan.

FINAL RECIPE • YIELD, EXACT INGREDIENTS AND NUMBERED METHOD

Teacher to confirm: Actual practical date, lesson time, bay arrangements and supplied ingredients.

Evidence checkpoint: Ask your teacher how this paper evidence should be stored or submitted. Formal submission arrangements are Teacher to confirm.

MODULE 09

Produce and present

Manage safety, timing and quality while making the final product.

Visual focus for Module 9: Produce and present.

YOU WILL LEARN

- 9.1 Follow, monitor, adapt
- 9.2 Quality control
- 9.3 Presentation and evidence

EVIDENCE CHECKPOINT

- 3 theory sections
- 12 knowledge-check questions
- 3 guided written responses
- 1 project activity

Teacher to confirm: Lesson timing, practical arrangements, ingredients, equipment, dietary and allergen requirements, supervision and formal submission details.

MODULE 9 · READ

9.1 Follow, monitor, adapt

Use the workplan as a guide, not as an excuse to ignore evidence. Monitor appearance, texture, temperature controls and time. If a safe change is needed, pause, consult the teacher when required, record what changed and explain why.

MAKE THE REAL PRODUCT EASY TO JUDGE

✓ clean background ✓ show layers + scale ✓ honest evidence

Course infographic: Produce and present.

Stop and think: Underline two subject words in the theory. In the margin, write how each word connects to your burger project.

CHECK YOUR UNDERSTANDING

1. Which statement best defines monitored production?

A following the plan while observing evidence and making safe, recorded adjustments	B a decorative feature with no effect on the product	C a task completed only after the final practical
---	--	---

2. Which action best applies the theory?

A hide changes because they differ from the written plan	B wait until evaluation before considering it	C watch appearance, texture, time and required safety controls
--	---	--

3. Which risk does this section help the student recognise?

A the website changing colour	B having to explain a justified choice	C blindly following the plan can ignore real conditions
-------------------------------	--	---

4. Which correction best addresses the misconception “changing the plan always means the planning failed”?

A the misconception is always correct	B evidence and criteria are unnecessary	C a justified safe adaptation can show effective monitoring
---------------------------------------	---	---

Your score after checking the answer key: ____ / 4 One idea to revisit: _____

MODULE 9 · EXPLAIN

Guided response · 9.1 Follow, monitor, adapt

Your task: Write a production log: what followed the plan, what changed, why it changed and how safety was maintained.

Compare the real practical with your plan, then explain each change and the control that kept it safe.

1 Select the precise theory and evidence that answer the question.	2 Explain the connection using subject vocabulary and a clear because, so or therefore link.	3 Check that every part of the prompt is answered and that claims are specific.
--	--	---

Sentence starter: The production followed the plan when... I changed... because... Safety was maintained by...

Appropriate response example: Preparation followed the planned sequence, but the filling reached the teacher-directed quality check earlier than expected. I adjusted the timing, kept raw and ready-to-eat tools separate and recorded the change.

YOUR RESPONSE

Self-check: ☐ I answered every part ☐ I used subject vocabulary ☐ I linked claims with because, so or therefore ☐ I checked specificity

MODULE 9 · READ

9.2 Quality control

Quality control checks the product during production rather than waiting until the end. Examples include checking ingredient measurements, patty size, even preparation, browning, bun condition, layer order and workstation hygiene. Follow teacher instructions for checking that food is safely cooked.

Stop and think: Underline two subject words in the theory. In the margin, write how each word connects to your burger project.

CHECK YOUR UNDERSTANDING

1. Which statement best defines quality control?

A checking important product and process features during production	B a decorative feature with no effect on the product	C a task completed only after the final practical
---	--	---

2. Which action best applies the theory?

A wait until serving to notice every quality problem	B wait until evaluation before considering it	C check measurements, preparation, size, browning, layers and hygiene at planned points
--	---	---

3. Which risk does this section help the student recognise?

A the website changing colour	B having to explain a justified choice	C unchecked variation can affect safety, consistency and function
-------------------------------	--	---

4. Which correction best addresses the misconception “quality control is only about appearance”?

A the misconception is always correct	B evidence and criteria are unnecessary	C it includes safety, accuracy, consistency, function and hygiene
---------------------------------------	---	---

Your score after checking the answer key: ____ / 4 One idea to revisit: _____

MODULE 9 · EXPLAIN

Guided response · 9.2 Quality control

Your task: Record four quality-control checks for your final practical and the evidence you will collect for each.

Choose four points during production, state what you will check and name the proof you will keep.

1 Select the precise theory and evidence that answer the question.	2 Explain the connection using subject vocabulary and a clear because, so or therefore link.	3 Check that every part of the prompt is answered and that claims are specific.
--	--	---

Sentence starter: At the... stage I will check... My evidence will be...

Appropriate response example: Before cooking I will compare the patty diameter with the bun and record a measurement or clear photograph. During assembly I will check layer order against the annotated design.

YOUR RESPONSE

Self-check: ☐ I answered every part ☐ I used subject vocabulary ☐ I linked claims with because, so or therefore ☐ I checked specificity

MODULE 9 · READ

9.3 Presentation and evidence

Presentation should support the intended user and make the burger's structure visible. Use a clean plate or board, remove distracting spills and avoid inedible decoration. Photograph the finished product in good light from an angle that shows its layers and scale.

Record the final burger promptly. A photograph supports evidence but does not replace written evaluation.

Stop and think: Underline two subject words in the theory. In the margin, write how each word connects to your burger project.

CHECK YOUR UNDERSTANDING

1. Which statement best defines production evidence?

A an honest record that makes the real product and process easy to judge	B a decorative feature with no effect on the product	C a task completed only after the final practical
--	--	---

2. Which action best applies the theory?

A use an unrelated or heavily misleading image	B wait until evaluation before considering it	C present cleanly and photograph promptly in good light from a useful angle
--	---	---

3. Which risk does this section help the student recognise?

A the website changing colour	B having to explain a justified choice	C clutter, poor light or decorative tricks can hide important features
-------------------------------	--	--

4. Which correction best addresses the misconception “a strong photograph replaces written evaluation”?

A the misconception is always correct	B evidence and criteria are unnecessary	C the image supports evidence but the judgement must still be explained
---------------------------------------	---	---

Your score after checking the answer key: ____ / 4 One idea to revisit: _____

MODULE 9 · EXPLAIN

Guided response · 9.3 Presentation and evidence

Your task: Plan the photographs needed to prove production and final-product quality. Explain what each image must show.

Name the process and final photographs you need, and connect each image to a fact it will prove.

1 Select the precise theory and evidence that answer the question.	2 Explain the connection using subject vocabulary and a clear because, so or therefore link.	3 Check that every part of the prompt is answered and that claims are specific.
--	--	---

Sentence starter: I will photograph... This image will show... and support...

Appropriate response example: I will photograph the measured and shaped filling before cooking to show size control, then the assembled burger in clear side light to show layer order, proportion and final condition.

YOUR RESPONSE

Self-check: ☐ I answered every part ☐ I used subject vocabulary ☐ I linked claims with because, so or therefore ☐ I checked specificity

MODULE 9 · APPLY

Project activity 9 · Production evidence log

BEFORE · READINESS AND SETUP EVIDENCE

DURING · FOUR QUALITY-CONTROL CHECKPOINTS

CHANGES TO THE PLAN AND REASONS

FINAL PHOTOGRAPH FILENAME AND WHAT IT SHOWS

TEACHER OR PEER FEEDBACK AND HOW YOU RESPONDED

Evidence checkpoint: Ask your teacher how this paper evidence should be stored or submitted. Formal submission arrangements are Teacher to confirm.

MODULE 10

Evaluate and reflect

Judge the solution with evidence and use the result to improve.

Visual focus for Module 10: Evaluate and reflect.

YOU WILL LEARN

- 10.1 Evaluate against criteria
- 10.2 Consider the whole solution
- 10.3 Reflect and improve

EVIDENCE CHECKPOINT

- 3 theory sections
- 12 knowledge-check questions
- 3 guided written responses
- 1 project activity

Teacher to confirm: Lesson timing, practical arrangements, ingredients, equipment, dietary and allergen requirements, supervision and formal submission details.

MODULE 10 · READ

10.1 Evaluate against criteria

Evaluation is a reasoned judgement, not a description of what you did. Return to each success criterion, state the result, cite evidence and explain the judgement. Evidence may include observations, measurements, photographs, user feedback and comparison with the design plan.

Course infographic: Evaluate and reflect.

Stop and think: Underline two subject words in the theory. In the margin, write how each word connects to your burger project.

CHECK YOUR UNDERSTANDING

1. Which statement best defines evidence-based evaluation?

A a reasoned judgement of how well the solution met stated criteria	B a decorative feature with no effect on the product	C a task completed only after the final practical
---	--	---

2. Which action best applies the theory?

A repeat the production method instead of judging the result	B wait until evaluation before considering it	C state the criterion, cite evidence and explain the judgement
--	---	--

3. Which risk does this section help the student recognise?

A the website changing colour	B having to explain a justified choice	C unsupported praise hides weaknesses and learning
-------------------------------	--	--

4. Which correction best addresses the misconception “evaluation means describing what was made”?

A the misconception is always correct	B evidence and criteria are unnecessary	C evaluation judges the result against criteria using evidence
---------------------------------------	---	--

Your score after checking the answer key: ____ / 4 One idea to revisit: _____

MODULE 10 · EXPLAIN

Guided response · 10.1 Evaluate against criteria

Your task: Evaluate your final burger against at least six criteria. For each, give evidence and a clear judgement.

For six criteria, use the pattern criterion, evidence, judgement; do not merely describe the product.

1 Select the precise theory and evidence that answer the question.	2 Explain the connection using subject vocabulary and a clear because, so or therefore link.	3 Check that every part of the prompt is answered and that claims are specific.
--	--	---

Sentence starter: For the criterion... my evidence is... Therefore, the burger...

Appropriate response example: For stability, the burger remained intact when lifted and no filling fell out in the handling test. Therefore, it met the criterion for comfortable eating.

YOUR RESPONSE

Self-check: ☐ I answered every part ☐ I used subject vocabulary ☐ I linked claims with because, so or therefore ☐ I checked specificity

MODULE 10 · READ

10.2 Consider the whole solution

Evaluate function, appearance, sensory properties, ergonomics, cost, resource use, safety, cultural suitability, ethical factors, sustainability and technical quality where relevant. Not every factor will be equally important, so explain priorities. Feedback is useful evidence, but one person's preference should not automatically outweigh the brief or safety requirements.

Stop and think: Underline two subject words in the theory. In the margin, write how each word connects to your burger project.

CHECK YOUR UNDERSTANDING

1. Which statement best defines whole-solution evaluation?

A judging the relevant functional, sensory, safety, resource and social dimensions together	B a decorative feature with no effect on the product	C a task completed only after the final practical
---	--	---

2. Which action best applies the theory?

A allow one person's preference to override safety requirements	B wait until evaluation before considering it	C explain which factors mattered most for this brief and user
---	---	---

3. Which risk does this section help the student recognise?

A the website changing colour	B having to explain a justified choice	C equal weighting can hide critical requirements such as safety or function
-------------------------------	--	---

4. Which correction best addresses the misconception "every evaluation factor must have identical importance"?

A the misconception is always correct	B evidence and criteria are unnecessary	C importance depends on the brief, user, constraints and non-negotiable safety
---------------------------------------	---	--

Your score after checking the answer key: ____ / 4 One idea to revisit: _____

MODULE 10 · EXPLAIN

Guided response · 10.2 Consider the whole solution

Your task: Explain which evaluation factors were most important for this project and how you balanced a trade-off.

Choose the priority factors, justify their importance and explain one case where improving one factor affected another.

1 Select the precise theory and evidence that answer the question.	2 Explain the connection using subject vocabulary and a clear because, so or therefore link.	3 Check that every part of the prompt is answered and that claims are specific.
--	--	---

Sentence starter: The most important factors were... because... A trade-off occurred between...

Appropriate response example: Safety and function were priorities because the product had to be suitable for school production and comfortable to eat. Extra sauce improved flavour but weakened the base, so I reduced it to balance sensory quality and stability.

YOUR RESPONSE

Self-check: ☐ I answered every part ☐ I used subject vocabulary ☐ I linked claims with because, so or therefore ☐ I checked specificity

MODULE 10 · READ

10.3 Reflect and improve

A useful improvement is specific and achievable: name what would change, how it would change and the expected effect. “Reduce the sauce from two tablespoons to one so the base stays firm” is stronger than “make it better”. Finish by reflecting on your planning, practical skills, independence and response to problems. Honest reflection shows learning.

Stop and think: Underline two subject words in the theory. In the margin, write how each word connects to your burger project.

CHECK YOUR UNDERSTANDING

1. Which statement best defines specific improvement?

A an achievable change that states what will change, how and with what expected effect	B a decorative feature with no effect on the product	C a task completed only after the final practical
--	--	---

2. Which action best applies the theory?

A write only “make it better next time”	B wait until evaluation before considering it	C connect each weakness to a precise modification and predicted result
---	---	--

3. Which risk does this section help the student recognise?

A the website changing colour	B having to explain a justified choice	C general reflection can avoid the real cause of a problem
-------------------------------	--	--

4. Which correction best addresses the misconception “honest reflection means listing only mistakes”?

A the misconception is always correct	B evidence and criteria are unnecessary	C reflection recognises successes, learning, independence and specific next steps
---------------------------------------	---	---

Your score after checking the answer key: ____ / 4 One idea to revisit: _____

MODULE 10 · EXPLAIN

Guided response · 10.3 Reflect and improve

Your task: Identify three specific improvements and reflect on your planning, practical skills, independence and response to problems.

Give three exact next-time changes with expected effects, then judge how your process and skills developed.

1 Select the precise theory and evidence that answer the question.	2 Explain the connection using subject vocabulary and a clear because, so or therefore link.	3 Check that every part of the prompt is answered and that claims are specific.
--	--	---

Sentence starter: Next time I will change... by... This should... I improved my ability to...

Appropriate response example: Next time I will reduce the sauce from two tablespoons to one and keep it away from the base so the bun remains firmer. I also became more independent in organising mise en place and responding calmly to timing changes.

YOUR RESPONSE

Self-check: ☐ I answered every part ☐ I used subject vocabulary ☐ I linked claims with because, so or therefore ☐ I checked specificity

MODULE 10 · APPLY

Project activity 10 · Evaluation builder

Build each judgement from a criterion, evidence and a specific improvement.

Criterion	Evidence	Judgement	Specific improvement
Function and ergonomics			
Sensory and appearance			
Safety and production			
Ethical and environmental choices			

REFLECT ON PLANNING, PRACTICAL SKILLS, INDEPENDENCE AND PROBLEM-SOLVING

Evidence checkpoint: Ask your teacher how this paper evidence should be stored or submitted. Formal submission arrangements are Teacher to confirm.

Knowledge-check answer key

Use this section after attempting the questions. A wrong answer is a signal to reread the named theory section, not a final judgement about your learning.

Module	Theory section	Q	Answer and revisit point
1	1.1 Design situation and brief	1	A · a clear design task developed from a need or opportunity · Revisit: 1.1 Design situation and brief
1	1.1 Design situation and brief	2	C · identify the product, intended user and important qualities before developing ideas · Revisit: 1.1 Design situation and brief
1	1.1 Design situation and brief	3	C · a visually appealing product may fail to answer the brief · Revisit: 1.1 Design situation and brief
1	1.1 Design situation and brief	4	C · a brief defines the task; the recipe is developed later · Revisit: 1.1 Design situation and brief
1	1.2 Users and needs	1	A · something the customer or producer requires from the solution · Revisit: 1.2 Users and needs
1	1.2 Users and needs	2	C · balance flavour, appearance, value, convenience, size and production needs · Revisit: 1.2 Users and needs
1	1.2 Users and needs	3	C · extra height or too many fillings can reduce stability and convenience · Revisit: 1.2 Users and needs
1	1.2 Users and needs	4	C · ingredients must work together without making production or eating difficult · Revisit: 1.2 Users and needs
1	1.3 Criteria and constraints	1	A · a specific quality that can be checked to judge design success · Revisit: 1.3 Criteria and constraints
1	1.3 Criteria and constraints	2	C · write measurable or observable criteria and list realistic constraints · Revisit: 1.3 Criteria and constraints
1	1.3 Criteria and constraints	3	C · vague criteria make evaluation unsupported · Revisit: 1.3 Criteria and constraints
1	1.3 Criteria and constraints	4	C · criteria judge success; constraints are the limits on the work · Revisit: 1.3 Criteria and constraints
2	2.1 Personal hygiene	1	A · actions that prevent a food handler transferring contamination to food · Revisit: 2.1 Personal hygiene
2	2.1 Personal hygiene	2	C · secure hair, cover cuts, wear required protection and wash and dry hands correctly · Revisit: 2.1 Personal hygiene
2	2.1 Personal hygiene	3	C · touching raw food, waste, hair or the face can contaminate hands again · Revisit: 2.1 Personal hygiene
2	2.1 Personal hygiene	4	C · hands must be washed at required times even when they look clean · Revisit: 2.1 Personal hygiene
2	2.2 Cross-contamination	1	A · the transfer of harmful microorganisms or allergens between food, people, tools or surfaces · Revisit: 2.2 Cross-contamination
2	2.2 Cross-contamination	2	C · separate raw and ready-to-eat foods and use cleaned, sanitised equipment · Revisit: 2.2 Cross-contamination
2	2.2 Cross-contamination	3	C · hands, boards, knives or benches can carry contamination · Revisit: 2.2 Cross-contamination
2	2.2 Cross-contamination	4	C · equipment must be washed and sanitised as instructed before reuse · Revisit: 2.2 Cross-contamination
2	2.3 Hazards and controls	1	A · an action that reduces the chance or severity of harm · Revisit: 2.3 Hazards and controls
2	2.3 Hazards and controls	2	C · match each identified hazard with a specific control · Revisit: 2.3 Hazards and controls
2	2.3 Hazards and controls	3	C · unstable boards, hidden knives, hot equipment or potting-mix dust can cause harm · Revisit: 2.3 Hazards and controls
2	2.3 Hazards and controls	4	C · risk is reduced only when an effective control is applied · Revisit: 2.3 Hazards and controls
3	3.1 Mise en place	1	A · putting ingredients, equipment and the work area in place before production · Revisit: 3.1 Mise en place
3	3.1 Mise en place	2	C · read the method, prepare the bench, collect tools and measure ingredients · Revisit: 3.1 Mise en place
3	3.1 Mise en place	3	C · missing tools or ingredients can cause unsafe rushing · Revisit: 3.1 Mise en place
3	3.1 Mise en place	4	C · it includes the method, hygiene, equipment, ingredients, waste and safe setup · Revisit: 3.1 Mise en place
3	3.2 Selecting tools	1	A · choosing equipment because its function suits the required task · Revisit: 3.2 Selecting tools
3	3.2 Selecting tools	2	C · match the cook's knife, small knife, scale, spoons or spatula to its intended job · Revisit: 3.2 Selecting tools

Module	Theory section	Q	Answer and revisit point
3	3.2 Selecting tools	3	C · an unsuitable tool can reduce control or create a hazard · Revisit: 3.2 Selecting tools
3	3.2 Selecting tools	4	C · tool size and function should match the ingredient and operation · Revisit: 3.2 Selecting tools
3	3.3 A clean workflow	1	A · an ordered movement from preparation through cooking, assembly and cleaning · Revisit: 3.3 A clean workflow
3	3.3 A clean workflow	2	C · clean as you go, manage spills and return ingredients to safe storage · Revisit: 3.3 A clean workflow
3	3.3 A clean workflow	3	C · spills, projecting handles and clutter can cause injury or contamination · Revisit: 3.3 A clean workflow
3	3.3 A clean workflow	4	C · cleaning and safe storage occur throughout production · Revisit: 3.3 A clean workflow
4	4.1 A layered food system	1	A · interacting burger parts in which each layer affects the whole product · Revisit: 4.1 A layered food system
4	4.1 A layered food system	2	C · give every layer a clear function and arrange it deliberately · Revisit: 4.1 A layered food system
4	4.1 A layered food system	3	C · excess moisture or poorly matched layers can weaken the whole product · Revisit: 4.1 A layered food system
4	4.1 A layered food system	4	C · a change to one layer can affect stability, texture, moisture and flavour elsewhere · Revisit: 4.1 A layered food system
4	4.2 Sensory properties	1	A · a product feature detected through appearance, aroma, flavour, texture or sound · Revisit: 4.2 Sensory properties
4	4.2 Sensory properties	2	C · use exact sensory vocabulary and plan complementary contrasts · Revisit: 4.2 Sensory properties
4	4.2 Sensory properties	3	C · too many competing flavours or textures can make the product confusing · Revisit: 4.2 Sensory properties
4	4.2 Sensory properties	4	C · it uses precise observations across several senses · Revisit: 4.2 Sensory properties
4	4.3 Function and stability	1	A · the ability of the assembled product to remain together and comfortable to hold · Revisit: 4.3 Function and stability
4	4.3 Function and stability	2	C · drain vegetables, match component sizes and position wet or slippery layers carefully · Revisit: 4.3 Function and stability
4	4.3 Function and stability	3	C · poor layer order can make the product difficult to eat · Revisit: 4.3 Function and stability
4	4.3 Function and stability	4	C · height must be balanced with ergonomics, stability and ease of eating · Revisit: 4.3 Function and stability
5	5.1 From primary production to plate	1	A · the connected stages from primary production through processing, transport, retail and service · Revisit: 5.1 From primary production to plate
5	5.1 From primary production to plate	2	C · link each ingredient to its agricultural industry and later journey stages · Revisit: 5.1 From primary production to plate
5	5.1 From primary production to plate	3	C · missing stages can lead to unsupported origin or sustainability claims · Revisit: 5.1 From primary production to plate
5	5.1 From primary production to plate	4	C · they connect primary production to the final food product · Revisit: 5.1 From primary production to plate
5	5.2 Local and seasonal choices	1	A · a claim supported by a defined region and evidence of producer or ingredient origin · Revisit: 5.2 Local and seasonal choices
5	5.2 Local and seasonal choices	2	C · define the region and verify producer, origin, distance and season · Revisit: 5.2 Local and seasonal choices
5	5.2 Local and seasonal choices	3	C · unverified language can mislead the user · Revisit: 5.2 Local and seasonal choices
5	5.2 Local and seasonal choices	4	C · availability and price still need current checking · Revisit: 5.2 Local and seasonal choices
5	5.3 Ethical and environmental factors	1	A · a choice that considers environmental, ethical and practical effects across the production system · Revisit: 5.3 Ethical and environmental factors
5	5.3 Ethical and environmental factors	2	C · compare evidence about soil, water, welfare, energy, packaging, transport and waste · Revisit: 5.3 Ethical and environmental factors
5	5.3 Ethical and environmental factors	3	C · single-factor claims can hide important impacts elsewhere · Revisit: 5.3 Ethical and environmental factors
5	5.3 Ethical and environmental factors	4	C · responsibility depends on evidence, context and multiple factors · Revisit: 5.3 Ethical and environmental factors
6	6.1 Divergent thinking	1	A · generating several meaningfully different responses before selecting one · Revisit: 6.1 Divergent thinking
6	6.1 Divergent thinking	2	C · change filling, bun, herbs, vegetables, sauce, form or flavour direction · Revisit: 6.1 Divergent thinking
6	6.1 Divergent thinking	3	C · early fixation may hide a stronger solution · Revisit: 6.1 Divergent thinking

Module	Theory section	Q	Answer and revisit point
6	6.1 Divergent thinking	4	C · options should change ingredients, form, function or flavour in a meaningful way · Revisit: 6.1 Divergent thinking
6	6.2 Annotating concepts	1	A · a note that explains the reason, function or expected effect of a design decision · Revisit: 6.2 Annotating concepts
6	6.2 Annotating concepts	2	C · label ingredients, layer order, sensory effect, source, safety and user benefit · Revisit: 6.2 Annotating concepts
6	6.2 Annotating concepts	3	C · unexplained drawings provide weak evidence of design thinking · Revisit: 6.2 Annotating concepts
6	6.2 Annotating concepts	4	C · a strong annotation explains why the feature matters · Revisit: 6.2 Annotating concepts
6	6.3 Choosing with evidence	1	A · choosing a concept by comparing it with criteria and explaining trade-offs · Revisit: 6.3 Choosing with evidence
6	6.3 Choosing with evidence	2	C · score options, give reasons and identify a needed refinement · Revisit: 6.3 Choosing with evidence
6	6.3 Choosing with evidence	3	C · unsupported scores can create a false appearance of objectivity · Revisit: 6.3 Choosing with evidence
6	6.3 Choosing with evidence	4	C · the designer must interpret the scores and explain the choice · Revisit: 6.3 Choosing with evidence
7	7.1 What plants need	1	A · a condition or resource required for healthy growth · Revisit: 7.1 What plants need
7	7.1 What plants need	2	C · manage light, water, air, temperature, nutrients and root conditions together · Revisit: 7.1 What plants need
7	7.1 What plants need	3	C · too much water can reduce oxygen around roots · Revisit: 7.1 What plants need
7	7.1 What plants need	4	C · both shortages and excesses can limit plant health · Revisit: 7.1 What plants need
7	7.2 Growing and harvesting herbs	1	A · collecting correctly identified healthy plant material while protecting safety and future growth · Revisit: 7.2 Growing and harvesting herbs
7	7.2 Growing and harvesting herbs	2	C · gain permission, identify the herb, use clean tools and wash produce as directed · Revisit: 7.2 Growing and harvesting herbs
7	7.2 Growing and harvesting herbs	3	C · misidentification or dirty tools can create food-safety problems · Revisit: 7.2 Growing and harvesting herbs
7	7.2 Growing and harvesting herbs	4	C · only correctly identified and approved produce may be used · Revisit: 7.2 Growing and harvesting herbs
7	7.3 Sustainability in practice	1	A · meeting present needs while protecting future environmental, social and economic wellbeing · Revisit: 7.3 Sustainability in practice
7	7.3 Sustainability in practice	2	C · water efficiently, care for soil, plan harvests and measure ingredients · Revisit: 7.3 Sustainability in practice
7	7.3 Sustainability in practice	3	C · vague sustainability slogans do not show a real effect · Revisit: 7.3 Sustainability in practice
7	7.3 Sustainability in practice	4	C · its resource, environmental and social effects must be considered · Revisit: 7.3 Sustainability in practice
8	8.1 A production-ready recipe	1	A · exact ingredients, quantities, yield and an ordered method that another cook can follow · Revisit: 8.1 A production-ready recipe
8	8.1 A production-ready recipe	2	C · use consistent units, preparation words and safe sequence · Revisit: 8.1 A production-ready recipe
8	8.1 A production-ready recipe	3	C · ambiguous instructions can cause errors, waste or unsafe sequencing · Revisit: 8.1 A production-ready recipe
8	8.1 A production-ready recipe	4	C · production requires precise quantities, preparation and sequence · Revisit: 8.1 A production-ready recipe
8	8.2 Food order and resources	1	A · a totalled list of ingredients required for the planned yield · Revisit: 8.2 Food order and resources
8	8.2 Food order and resources	2	C · check supplies, total quantities and flag allergens or storage needs · Revisit: 8.2 Food order and resources
8	8.2 Food order and resources	3	C · duplicates or unrealistic quantities increase cost and waste · Revisit: 8.2 Food order and resources
8	8.2 Food order and resources	4	C · the order totals requirements across the planned yield or group need · Revisit: 8.2 Food order and resources
8	8.3 Workplan	1	A · a timed map of activities, equipment and ingredients across the practical · Revisit: 8.3 Workplan
8	8.3 Workplan	2	C · sequence tasks, identify safe overlaps and protect evidence and cleaning time · Revisit: 8.3 Workplan
8	8.3 Workplan	3	C · missing setup, photography or cleaning time can leave evidence or safety incomplete · Revisit: 8.3 Workplan
8	8.3 Workplan	4	C · it guides production and can be adapted safely with reasons recorded · Revisit: 8.3 Workplan
9	9.1 Follow, monitor, adapt	1	A · following the plan while observing evidence and making safe, recorded adjustments · Revisit: 9.1 Follow, monitor, adapt

Module	Theory section	Q	Answer and revisit point
9	9.1 Follow, monitor, adapt	2	C · watch appearance, texture, time and required safety controls · Revisit: 9.1 Follow, monitor, adapt
9	9.1 Follow, monitor, adapt	3	C · blindly following the plan can ignore real conditions · Revisit: 9.1 Follow, monitor, adapt
9	9.1 Follow, monitor, adapt	4	C · a justified safe adaptation can show effective monitoring · Revisit: 9.1 Follow, monitor, adapt
9	9.2 Quality control	1	A · checking important product and process features during production · Revisit: 9.2 Quality control
9	9.2 Quality control	2	C · check measurements, preparation, size, browning, layers and hygiene at planned points · Revisit: 9.2 Quality control
9	9.2 Quality control	3	C · unchecked variation can affect safety, consistency and function · Revisit: 9.2 Quality control
9	9.2 Quality control	4	C · it includes safety, accuracy, consistency, function and hygiene · Revisit: 9.2 Quality control
9	9.3 Presentation and evidence	1	A · an honest record that makes the real product and process easy to judge · Revisit: 9.3 Presentation and evidence
9	9.3 Presentation and evidence	2	C · present cleanly and photograph promptly in good light from a useful angle · Revisit: 9.3 Presentation and evidence
9	9.3 Presentation and evidence	3	C · clutter, poor light or decorative tricks can hide important features · Revisit: 9.3 Presentation and evidence
9	9.3 Presentation and evidence	4	C · the image supports evidence but the judgement must still be explained · Revisit: 9.3 Presentation and evidence
10	10.1 Evaluate against criteria	1	A · a reasoned judgement of how well the solution met stated criteria · Revisit: 10.1 Evaluate against criteria
10	10.1 Evaluate against criteria	2	C · state the criterion, cite evidence and explain the judgement · Revisit: 10.1 Evaluate against criteria
10	10.1 Evaluate against criteria	3	C · unsupported praise hides weaknesses and learning · Revisit: 10.1 Evaluate against criteria
10	10.1 Evaluate against criteria	4	C · evaluation judges the result against criteria using evidence · Revisit: 10.1 Evaluate against criteria
10	10.2 Consider the whole solution	1	A · judging the relevant functional, sensory, safety, resource and social dimensions together · Revisit: 10.2 Consider the whole solution
10	10.2 Consider the whole solution	2	C · explain which factors mattered most for this brief and user · Revisit: 10.2 Consider the whole solution
10	10.2 Consider the whole solution	3	C · equal weighting can hide critical requirements such as safety or function · Revisit: 10.2 Consider the whole solution
10	10.2 Consider the whole solution	4	C · importance depends on the brief, user, constraints and non-negotiable safety · Revisit: 10.2 Consider the whole solution
10	10.3 Reflect and improve	1	A · an achievable change that states what will change, how and with what expected effect · Revisit: 10.3 Reflect and improve
10	10.3 Reflect and improve	2	C · connect each weakness to a precise modification and predicted result · Revisit: 10.3 Reflect and improve
10	10.3 Reflect and improve	3	C · general reflection can avoid the real cause of a problem · Revisit: 10.3 Reflect and improve
10	10.3 Reflect and improve	4	C · reflection recognises successes, learning, independence and specific next steps · Revisit: 10.3 Reflect and improve

Final workbook check

Before handing in or discussing your workbook, use this page to check that the evidence tells the story of your design process.

- ☐ My name, class and teacher are on the cover.
- ☐ I attempted every theory knowledge check before using the answer key.
- ☐ My written responses answer every part of each prompt and use subject vocabulary.
- ☐ My criteria are testable and my final choice is justified with evidence.
- ☐ My recipe, food order and workplan agree with one another.
- ☐ My practical evidence records what happened, including changes and feedback.
- ☐ My evaluation uses criteria, evidence, judgements and specific improvements.
- ☐ I followed my teacher's current safety, allergen, practical and submission instructions.

THE STRONGEST EVIDENCE IN MY WORKBOOK IS

THE NEXT THING I NEED TO IMPROVE OR CONFIRM IS

Keep the boundary clear: This printed workbook is a learning and evidence tool. Your teacher confirms what must be formally submitted and how.
